

VEHICLE AIR CONDITIONING SANITISATION

The Purifier

The CliPLight Purifier is a professional ozone generator of high capacity (100mg/h) which, using the strong oxidising power, kills bacteria, moulds & mildews and neutralises all types of odours including tobacco smoke and pet smells.

The Purifier will cleanse the vehicle by permeating the fabrics of the upholstery, seats, roof linings and trim as well as the air circulation system. Purifies within Minutes!

Benefits of the Purifier

- Simple & Easy to Operate
- No need to separate any A/C Components
- Supplied with 12 Volt lighter Adapter
- No Use of any Chemicals
- Removes odours such as: -
 - Tobacco Smoke
 - Petrol Smells
 - Pet & Other Musty Odours
- Treatment while you wait
- Excellent ***Profit*** generating investment

How does Ozone work?

Ozone is a molecule of three oxygen atoms bound together (O_3), with negative electric charge. The ozone operates according to the principle of oxidation. When the static loaded ozone molecule (O_3) contact with something "able to oxidise", the charge of the ozone molecule will directly flow over. This is because ozone is very unstable and tends to turn back into its original form (O_2).

Ozone can oxidise with all kinds of materials, but also with odours and micro-organisms like viruses, moulds and bacteria. The extra oxygen atom releases from the ozone molecule and binds with other the other material. In the end, only the pure and stable oxygen molecule remains.
